Serv-U v15.1.2 Release Notes

Updated 21/07/2015

These release notes provide additional guidance for Serv-U v15.1.2.

Important:

- NPAPI will be deprecated in Google Chrome by September 2015. After this time, Web Client Pro will not function in Google Chrome. As a workaround, access Web Client Pro in other browsers.

Contents

New Features and Improvements

Serv-U v15.1.2 includes the following new features and improvements:

- **Improved SMTP configuration experience**
  When setting up an SMTP server, it is now possible to send test emails to verify the SMTP configuration.

- **Security improvements**
  Serv-U now supports TLS 1.1 and 1.2, and also supports 15 new cipher suites.

- **Redesigned Mobile Web Client and other design enhancements**
  The Mobile Web Client now comes in enhanced design, matching the general look and feel of Serv-U.

- **Updated default web client settings**
  It is now possible to set up Web Client Pro as the default web client.

- **Enhanced event management**
  New Serv-U event providing the option to get a notification when a file is moved automatically by the server.
